

SunSmile Herbal Deodorant

SunSmile Herbal Deodorant keeps you fresh and complements your Sunrider personal care regimen. Feel confident all day long.

Benefits

- ❖ Powerfully concentrated formula, made from the finest quality ingredients and herbal extracts.
- ❖ Fresh, clean scent with long-lasting protection.
- ❖ Roll-up for easy application.
- ❖ Applies smoothly in controlled amounts.
- ❖ Will not stain clothing.

Why It Is Better

Naturally fragranced, our deodorant is kind to sensitive skin and won't cause allergic reactions. Is natural, aluminium-free and will allow you to perspire and still smell fresh all day long.

To Use:

Turn dial to raise product. Glide on, applying evenly to underarm. Replace cap after each use.

Ingredients:

Cyclomethicone, tripalmitin, dimethiconol, talc, dimethicone copolyol, organopolysiloxane, polysorbate 60, sodium bicarbonate (baking soda), fragrance (natural), zinc ricinoleate, tocopheryl acetate, phenyl trimethicone, sd alcohol 40-b, triclosan, zinc oxide, propylparaben, benzoin extract, thyme extract, chamomile extract, balm mint extract, oat extract, tea tree oil, lemon oil, cypress oil, evening primrose oil.

Avoid using commercial deodorants

Most commercial deodorants are also anti-perspirants too and here lies the important difference. Deodorants mask the smell of body odour, which are actually bacteria. Anti-perspirants block the pores of the skin to stop you from perspiring, but the problem here is that, especially with your underarms, this stops your glands from excreting toxins from your system. (you have lymph glands in this area). Apart from the nasty amounts of aluminium these products contain, there is also a growing amount of evidence to support the theory that anti-perspirants (and bra's, ladies) could cause a build up of toxins in your system that can aggravate and possibly cause such serious things as breast cancer. Think about this for a minute - if in the name of vanity, you took something to prevent other bodily excretions from occurring, how long do you think you would remain in good health?
